

## [Urban Gardens City Project](#) [1]

The project 'Urban Gardens' was established in 2013 by the City of Zagreb to enable citizens to temporarily use small cultivable plots in the city for the production of food, spices and flowers for their own needs. Besides the sustainable use of the land owned by the city, the project has many positive impacts like improved availability of healthy food, protection of city nature and biodiversity, promotion of healthy lifestyle and creating new relationships between citizens. Nowadays, there are already 10 urban gardens in Zagreb, but due to high interest a few more gardens are planned. The process of distributing plots to citizens is placed through public calls in which socially disadvantaged citizens have an advantage.
