

[Research for a Post-Carbon Future \[1\]](#)

[2]

17 September 2014 - 9:30am
Ecologic Institute

The *Research for a Post-Carbon Future* conference will focus on Europe's transition to a post-carbon society. There are still many technological, political, societal, economic, and behavioral obstacles in achieving such a deep transformation. But visioning where we are headed also reveals key opportunities. Experts from academia and policy will bring together applied and theoretical perspectives to discuss state-of-the-art socio-economic research, probing the most controversial aspects of the post-carbon transition debate.

The conference will showcase the work of Ecologic Institute and invited external guests. It will present research from three separate European Commission-funded projects investigating the European energy transformation, "Transition towards Low-Carbon Energy Security" ([MILESECURE 2050 \(link is external\) \(link is external\)](#) [3]), Post-Carbon Cities in Europe: A Long-Term Outlook ([POCACITO \(link is external\)](#) [4]), and Combining Policy Instruments to Achieve Europe's 2050 Climate Targets ([CECILIA 2050 \(link is external\)](#) [4]).
